

The dependable choice
for acidity
& ulcer pain

Infate-0

Sucralfate 1 gm +
Oxetacaine 20 mg/10ml

Suspension

Sucralfate

- Reacts with gastric acid to form a long acting acid buffer for as long as 6 to 8 hours after a single dose.
- It also attaches to proteins on the surface of ulcers forming protective barriers at the ulcer surface, preventing further damage from acid, pepsin & bile.
- Useful in the treatment of gastric and duodenal ulcer; it is cytoprotective and able to increase the bioavailability of several growth factors, modulating the wound healing process

Oxetacaine

- Is a potent local anesthetic that is administered orally for the relief of pain associated with peptic ulcer disease or esophagitis.
- Is highly active even in highly acidic conditions.

Indications

Duodenal ulcer

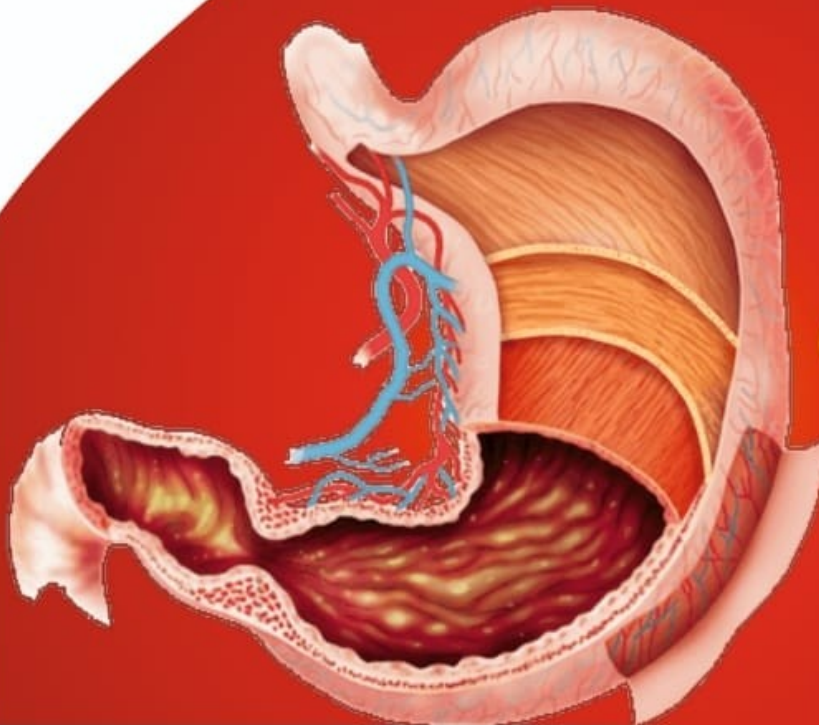

Gastric ulcer

Reflux esophagitis

GERD

Stress ulcer
